(a) attack suite: outcome and detection time
A dataset tampering
B model substitution
C broken provenance
D invalid signature
E poison before signing
F revocation + bypasses
G external source
48 variants, observed status
verified
warning
failed

verification time of the attacked artifact incl. its chain (ms, log)
(b) what attestation costs
A inference, 1 sample
D inference after verified deploy
B full chain verification V0-V9
C1 verify + audit log + safe read
C2 safe load (safetensors)
C3 smoke test (360 samples)
C first secure deployment, total
trust log replay, 5 records
trust log replay, 50 records
trust log replay, 500 records
